SKILLS

1. Networking and Infrastructure

- Network design & Implementation
- IP addressing & Subnetting
- VLANs
- DHCP, DNS, ACL, NAT

2. Operating System and Tools

- VirtualBox / VMware
- CentOS, Ubuntu, Kali Linux
- Windows, Windows server 2019/2022
- Nmap, Wireshark, Metasploit, Burp Suite, Putty, VS Code, Python

3. Communication Languages

- Sinhala – fluent
- English – Professional Working Proficiency

Hiruth Samarasinghe

Cybersecurity

Network Security

A passionate undergraduate with hands-on experience in network configuration, troubleshooting, and system security. Currently following Ethical Hacking & Network Security degree awarded by Coventry University(UK) in partnership with NIBM(SL). Focused on developing practical skills in ethical hacking, vulnerability assessment, and secure network design. Committed to continuous learning and contributing to professional cybersecurity environments.

EDUCATION

BSc (Hons) in Ethical Hacking & Network Security 2026 – 2028
Coventry University(UK) in partnership with NIBM(SL)

Higher National Diploma in Network Engineering 2025 – 2026
National Institute of Business Management

Diploma in Network Engineering 2024 – 2025
National Institute of Business Management

CERTIFICATIONS

Red Hat System Administration I (RH124) - Ver. 9.3
Red Hat Academy

Red Hat System Administration II (RH134) - Ver. 9.3
Red Hat Academy

CCNA: Introduction to Networks
Cisco Networking Academy

Introduction to Cybersecurity

PROJECTS

1. Enterprise Network Infrastructure Design & Implementation – Diploma Final Project

- Successfully completed, commended by the project assessment panel for excellence in architecture design.
- Collaborated effectively within high-performing technical team, aligning technical strategy and ensuring high-availability design requirements were met.
- Configured Layer 2 and Layer 3 network architecture with VLAN segmentation for departments
- Implemented routing, NAT, ACLs, SSH, EtherChannel, Spanning Tree Protocol (STP), and EIGRP routing protocols
- Designed redundant network topology with main and backup routers/switches for high availability
- Configured and verified Windows Server services including DHCP, DNS, Syslog, TFTP
- Developed secure network access policies using ACLs
- Implemented centralized device management and monitoring with Syslog integration
- Created Wi-Fi heat maps, floor network layouts, server rack designs, and structured port mappings.

2. Firewall, Proxy & Load Balancing Infrastructure – System Administrative Project

- Successfully executed and recognized by the evaluation panel for outstanding practical implementation.
- Completed as an individual project with full responsibility for planning, implementation, and timely delivery.
- Configured segmented LAN, LAN2, and DMZ networks with custom firewall rules and secure traffic control
- Squid Proxy Server for centralized web access, caching, and internet traffic monitoring
- LightSquid reporting system for proxy usage analytics and bandwidth monitoring
- SquidGuard web filtering with blacklist and whitelist policies to restrict malicious and social media websites
- Weighted round-robin web load balancing across multiple web servers & Apache web servers and tested traffic distribution based on server capacity weight
- Automated Linux incremental backup solution using Rsync & daily backups using Cron jobs.

3. Secure Multi-Branch Network Security Implementation – Network Security Project

- Successfully finalized & highly rated by the project assessment panel for robust security hardening.
- Served as the Project team lead, driving the project towards success by managing risks and troubleshooting critical infrastructure bottlenecks.
- Site-to-site IPSec VPN tunnels between main and sub branch offices using Cisco ASA firewalls
- Network segmentation and secure inter-office communication for multiple departments
- Network security hardening techniques including secure console/VTY access, strong authentication, and disabling unused services/ports
- DHCP Snooping, Dynamic ARP Inspection (DAI), IP Source Guard, and VLAN hopping prevention
- Port security policies with MAC address restrictions and unused port shutdown procedures.
- Realistic enterprise bandwidth and secure WAN communication between branch offices.
